

Project Brief

G-Tak is a maintenance center for (smart) cellular devices of all kinds and models. Maximum 24 hours, with the possibility of repairing the device in the car, depending on the type of malfunction).

The project is mainly aimed at all smartphone users. Those who do not have enough time or face difficulty in going to the maintenance center, such as employees and women, or their children's devices, or users who live in areas far from the maintenance centers.

The application (G-Tak): It is an application that will be developed with an easy-to-handle user interface that enables the user to determine the type of device, the type of malfunction, and the place of residence, and in the end, the cost of the repair and the time required for that will be determined.

Project features.

The project is characterized by reducing the time and effort for the client in terms of:

- The time it will take to go and return to maintenance centers.
- Reducing effort during crowds.
- The customer will be able to repair his device from anywhere.
- The device can be delivered in a short time at the same place that the vehicle was repaired.
- The possibility of determining the appropriate time for the customer according to his desire.
- The location will be determined by GPS without the need for customer instructions.
